

WHY A COMPLETE FEED?

A well formulated complete feed has all nutrients that your bird needs to have a long, healthy life. Each portion of pellet, however small, is perfectly balanced from a nutritional point of view.

It is important to select the complete feed formula that most appropriately meets the needs of the species that you are going to feed.

Tasty

Healthy

DOES YOUR BIRD REJECT THE PELLETS?

This is a normal behavior at the beginning. Generally, parrots show fear of unknown foods. Our goal is to follow a correct food conversion method.

We must offer the pellets in the usual feeder, since the bird will always prefer it to any other.

This protocol is applicable to any parrot species.

Conversion method only suitable for healthy animals.

PELLET CONVERSION GUIDE

September 2019 Edition

PSITTACUS

SUN	MON	TUE	WED	THU	FRI	SAT
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

IT IS NOT DIFFICULT BUT YOU WILL NEED:

PATIENCE

Time of habituation to pellets is relative and it depends on each individual. You must not force your parrot!

CONFIDENCE

Do not offer any other food to your bird during the adaptation and conversion period.

OBSERVATION

Observe your bird's behaviour during all the process.

HOW TO MAKE THE CONVERSION?

PHASE 1 REAL INTAKE OF SEEDS

Calculate the amount of seeds that your parrot actually eats every day.

PHASE 2 FIRST GRADUAL CHANGE TO PELLETS

Replace half of the actual consumption of seeds with pellets. Mix them together in the usual feeder.

PHASE 3 SECOND GRADUAL CHANGE TO PELLETS

Again, reduce the amount of seeds and increase the amount of pellets.

PHASE 4 END OF CONVERSION

Remove seeds completely from the diet and offer your parrot only pellets.
